

ERIDAN Intercom and public address system

General description:

Eridan is the last generation intercom and public address system. It enables full duplex and simplex data flow using VOIP technology. Communication link between central unit and end points is Ethernet 100 local area network. End points can be two way (intercom) or one way (PA) unit. The system can contain both types of end points. Digital communication has big advantage than analog because there is no signal distortion and noise adding on communication link.

Features:

- VOIP using 10/100 Ethernet LAN
- Selective calls
- Group call (voice conference)
- Public address call
- Touch-screen display
- Flexible reconfiguration using WEB user interface
- Up to 32 users
- Input for background music

Technical Data:

Power supply	24V DC
Audio output power	10W
Audio outputs per end point	2
Audio outputs per system	64
Audio output power per systems	640W
